The key to controlling health care costs is knowing where benefit dollars are spent and the ability to monitor it. Transforming data into actionable management information helps you understand, predict and lower benefit costs. Quartz utilizes the Milliman MedInsight reporting tool to provide clients with a variety of standard report options to help them meet their business needs.

These reports cover a broad range of topics within the areas of population metrics, medical economics, pharmacy economics, preventive services and medical management. The Account Manager will work with the client to understand their area of focus to develop a reporting package that best represents a true financial and utilization picture for their population. All reports will be posted and accessed through the secure web portal, MyPlanTools.
